[REVIEWS](#)

Take a look at our **PiicoDev Starter Kit for Raspberry Pi Pico** - electronics modules designed and made right here in Newcastle. For makers by makers!

You'll also need some **Male Headers** to use with our PiicoDev Kit.

Introducing the **Raspberry Pi Pico**: a microcontroller board built using silicon designed by Raspberry Pi. And that's the special sauce - the onboard microcontroller (RP2040) has had input from the whole Raspberry Pi team, from design through to educational resources. Pico will likely become a popular contender for industrial applications along with projects around the home/classroom. If you are new to the world of Pico and MicroPython, then take a look at our **Getting Started Guide for Pico**.

All of that, and at a price that can't be ignored thanks to the scale of Raspberry Pi. What an age we live in!

We also have available an option with **headers pre-soldered**.

Make sure the USB cable you are using carries data like **ours does**.

Whether you prefer MicroPython or C, here is everything you need:

[Product overview page](#)

[MicroPython SDK / Guide](#)

[C/C SDK / Guide](#)

[Our Getting Started with Pico Guide](#)

[Raspberry Pi Pico Datasheet](#)

Utilities:

PicoTool (command line utility to find out these details for inspecting code on the Pico)

debugprobe (to use one Raspberry Pi Pico to debug another Pico, as a USB → SWD and UART converter)

Resetting Flash memory (if you want to make sure your Flash memory is empty)

Board Specifications

RP2040 microcontroller chip designed by Raspberry Pi in the United Kingdom

Dual-core ARM Cortex M0+ processor, flexible clock running up to 133 MHz

264kB of SRAM, and 2MB of on-board Flash memory

Castellated module allows soldering direct to carrier boards

USB 1.1 Host and Device support

Low-power sleep and dormant modes

Drag & drop programming using mass storage over USB

26 multi-function GPIO pins

2×SPI, 2×I2C, 2×UART, 3×12-bit ADC, 16×controllable PWM channels

Accurate clock and timer on-chip

Temperature sensor

Have a product question? [We're here to help!](#)

Accelerated digital logic libraries on-chip
 8×Programmable IO (PIO) state machines for custom peripheral support

If you purchase in increments of 480 units, then we will send a full reel of boards. The reel specs:

Units per reel: 480
 Reel size: 308mm x 77.4mm (3" tape width)

The whole Pico family:

	Pico 1	Pico 1 W (Wireless)	Pico 2	Pico 2 W (Wireless)
Without Headers	<u>Pico</u>	<u>Pico W</u>	<u>Pico 2</u>	<u>Pico 2 W</u>
Male Headers	<u>Pico H - Pico with Headers</u>	<u>Pico W with Headers</u>	<u>Pico 2 with Soldered Male Headers</u>	<u>Pico 2WH</u>

Other Pico Variants

Pico 1 with Female Headers
Pico 1 with Stackable Headers

Raspberry Pi Pico Workshop

This workshop is the **best place to get started** for all things Raspberry Pi Pico.

This course attempts to be one of the most comprehensive Pico courses for all levels of Maker, teaching not only fundamental skills in microcontrollers, coding, and electronics but also the wisdom and insights from many of the folks here at Core Electronics.
